

TRUSTED
TO **CONNECT**
YOU SAFELY

The Vidicue service has seen unprecedented demand and a massive surge in usage. This is primarily due to the increasing numbers of organisations seeking a secure and trusted video communication solution, specifically for authenticated participants.

Vidicue meets this requirement, as every external user has to authenticate online prior to being admitted into the lobby.

The platform provides end-to-end encryption and seamless connectivity, making it an assured choice for organisations needing to communicate securely, uphold trust and meet expectations.

Vidicue offers a complete online video meeting platform that will verify and manage all your meetings securely, addressing organisational concerns such as data privacy (GDPR).

“ Vidicue offers a **complete online video meeting platform** that will verify and manage all your meetings securely

What is Vidicue?

A secure, authenticated and end-to-end encrypted video communications platform.

The authentication process solves the issue of communicating over video with external parties where privacy is paramount, especially when people have not previously met one another.

Vidicue provides a dual layer of trust via an online authentication process, reassuring participants that all members of the meeting are legitimate. Privacy laws are stringent. Breaches could cause negative publicity, fines and loss of trust for organisations; Vidicue mitigates these risks. The platform is suitable for all verticals, in particular regulated industries such as Government, Corporate Enterprises, Finance and Healthcare where high security and trust are important.

Vidicue is already well adopted and used in multiple verticals, such as in healthcare by practitioners and patients in hospitals and community clinics.

How does Vidicue work?

Vidicue is an agnostic platform and very easy to implement across any organisation type. It's highly flexible, scalable and customisable.

Vidicue takes care of the call flow by providing an online portal, where lobbies can be created with virtual waiting rooms.

“ Vidicue takes care of the call flow with virtual waiting rooms.

Clients (e.g. patients) who want to have a meeting are sent a link to the meeting lobby. This prompts them to download the Vidicue Meeting App (IOS/Android/WIN/MacOS) and authenticate their identity.

After successful authentication, the client will end up in the virtual waiting room. The agent (e.g. healthcare practitioner) will then call clients into their meeting room. This is uniquely created at the start and will be deleted moments afterwards,

making the meeting highly secure. The agent is also required to authenticate, providing a dual layer of trust.

Additional clients, all of whom will be required to authenticate, can join the meeting, including partners, family members, interpreters or specialist practitioners.

Integration within organisations is easy. Only the meeting link to the lobby needs to be shared during the appointment. Any existing meeting booking system can be used.

Vidicue is also an ideal platform for interactive public meetings. All participants will be required to authenticate, making them known to the agent, so any undesirable behaviour can be addressed.

Additionally, an optional payment module is available, where attendees can pay upfront for a meeting or consultation.

I need Vidicue because I would like to...

- Meet people/parties I don't know
- Share sensitive or private information
- Demonstrate a trusted and secure connection
- Ensure organisational compliance on trust, data protection and privacy
- Have many (ad-hoc) meetings via video and need the call-flow to be managed
- Ensure multi-point secure video meetings
- Have a secured payment portal for paid video meetings

Benefits

- Secure, encrypted and authenticated
- Dual layer of trust
- Flexible B2B and B2C video meetings
- Sustainable and efficient meetings without travel
- Agnostic platform
- Complies with GDPR/ privacy laws
